# Behat Quick Setup Guide for Web Testing

**Author: André Ramos** 

https://github.com/aramos-cit/behat

August/2014

#### Installation

- Create folder c:\behat
- 2. Install the Java JRE https://www.java.com/en/download/
- 3. Install **WAMP** http://www.wampserver.com/en/download/
  - a. Edit file C:\wamp\bin\php\phpx.x.xx\php.ini and comment out the line extension=php\_openssl.dll
- 4. Install GIT http://git-scm.com/downloads
- 5. Add the path to the executables to the System's Path (Right click on "My Computer" > Properties > Advanced > Environment Variables):
  - a. Add paths to PHP, Git, Java, Behat (c:\behat\bin)
- 6. Download Selenium Server from <a href="http://docs.seleniumhq.org/download/">http://docs.seleniumhq.org/download/</a> and place the jar inside the folder c:\behat
- 7. Install **Composer** https://getcomposer.org/download/
  - a. Create a composer.json file inside c:\behat with the contents from the following pages
  - b. From a command prompt, run:

```
cd c:\behat
composer install
```

- 8. Initialize Behat
  - a. From a command prompt, run:

```
cd c:\behat
behat --init
```

- 9. Create a **behat.yml** file under c:\behat\ with the contents from the following pages.
- 10. Replace the file c:\behat\features\bootstrap\FeaturesContext.php with the contents from the following pages.

### **Getting Started**

#### 1. From a command prompt, run

```
cd c:\behat
java -jar selenium-server-standalone-X.XX.X.jar
```

Note: check the correct filename of your jar file.

#### 2. Write your features placing them under c:\behat\features

See an example in the following pages.

Behat by default makes a lot of commands available to work with web sites testing. To see those pre-defined commands, execute:

```
behat -di
```

If you need additional commands, you can create them in the file  $\verb|c:\be| hat features bootstrap| Features Context.php|$ 

# Contents for c:\behat\behat.yml

# Contents for c:\behat\features\bootstrap\FeaturesContext.php

```
<?php

use Behat\Behat\Context\ClosuredContextInterface,
    Behat\Behat\Context\TranslatedContextInterface,
    Behat\Behat\Context\BehatContext,
    Behat\Behat\Exception\PendingException;

use Behat\Gherkin\Node\PyStringNode,
    Behat\Gherkin\Node\TableNode;

use Behat\MinkExtension\Context\MinkContext;

/**
    * Features context.
    */
class FeatureContext extends MinkContext
{
    public function __construct(array $parameters)
    {
        // Initialize your context here
    }
}</pre>
```

# Contents for c:\behat\composer.json

```
{
    "require": {
        "behat/behat": "2.4.*@stable",
        "behat/mink": "1.4.*@stable",
        "behat/mink-extension": "*",
        "behat/mink-goutte-driver": "*",
        "behat/mink-selenium2-driver": "*"
},
    "minimum-stability": "dev",
    "config": {
        "bin-dir": "bin/"
}
```

# Feature file sample

Note: the features must be saved as <name>.feature under c:\behat\features\

```
Feature: Search on Yahoo

In order to find a web sote
As a user
I want to use the Yahoo search

@javascript

Scenario: Search for CI&T on Yahoo.com
Given I am on "https://br.search.yahoo.com"
When I fill in "yschsp" with "CI&T"
And I press "Buscar"
Then I should not see "foram encontrados resultados"
```
